Saint George Hospital University Medical Center New Naccache Clinics

Saint George Hospital University Medical Center has welcomed new clinics to its family.

In an effort to further cater to the growing demands of our patients, Saint George Hospital University Medical Center has expanded its services & outreach through a new location in Naccache inaugurated on November 9, 2012.

Those clinics serve as an out-patient facility where a wide range of health care services, including certain diagnostics, can be obtained without the need to visit the hospital. This facility will be a convenient geographical location for patients in Mount Lebanon, Naccache, Rabieh, Antelias and the Northern Lebanon region.

We understand that many patients would rather visit a facility closer to home for consultations, for that reason, we have decided to select a site which is conveniently located off the Beirut-Tripoli highway.
